Subject: Amendment to Borealis Application
Date: Tuesday, January 31, 2012 3:27:45 PM

Hello Lindsey Cymbalisy

Borealis Geopower would like to make a few minor amendments to our current application (MV2012X0001 Type A LUP Application and MV2012L4-0001 Type A WL Application) to the MVWLB;

- 1- There was reference in the Waste Management plan to re-injection of liquid drilling waste into our injection well (Original document: Page 10- Liquid Waste Management: Gray Water and Drilling Fluid). In light of the fact that all other drilling waste will be stored and then transported to an off-site location in BC, Borealis will also be shipping all liquid waste to the off-site location in BC. No drilling waste will be re-injected into the injection well.
- 2- There also appeared to be a formatting issue when documents were changed from Mac Word documents to pdf and duplicate lines were created. We have corrected this in the 'LUP application, Spill Contingency Plan and the Waste Management Plan and apologize for the confusion.

All updated documents are in the Dropbox file folder "Amendments Jan 2012" and a hard copy can be mailed if necessary. If it is possible to update the "items for review" on the MVLWB website that would be much appreciated.

Happily going green,

Craig Dunn, P.Geol

Attachments: [Amendment to Borealis Application \(6.90 KB\).msg](#)

Please post to registry under MV2012L4-0001 and MV2012X0001, Initial Application, Application and Related Documents. This is additional information regarding both the LUP and WL applications. The reformatted plans mentioned in the email will be posted after the public review period closes, because the only change in these documents is formatting, and no new information is provided for reviewers.
